

Features

- Removes Water & Solids

Applications

- Transformer Oil
- Lubrication Oil
- Diesel Fuel
- Kerosene
- Jet Fuel

System Compatibility

AOC

AHS

ABV

Allen Coalescer Filter Element

The Coalescer Filter Element (CE) provides a cost effective particle and emulsified water removal element for hydrocarbon fluids. The CE filter elements are employed as the first stage in coalescer/separator vessels. The CE perform two functions, first they coalesce or combine highly dispersed, emulsified water particles into larger water drops and secondly they filter-out particulate contaminants. The CE works at 0.5 μm and 0.3 μm ratings.

Outside Diameter	6 in (15.2 cm)
Inside Diameter	2.5 in (6.4 cm)
Length	44 in (111.8 cm)
Operating Temperature	150–160°F (65.6–71.1°C)
Replacement Pressure	75 psi (517,106.8 Pa) maximum pressure differential rating
